

## Product Catalog Dashboard Assignment

- A. It's required to create a PHP web application consuming an external API for displaying a list of products available for sale. Each product must show the following attributes:

- title
- description
- price
- rating
- image (thumbnail)

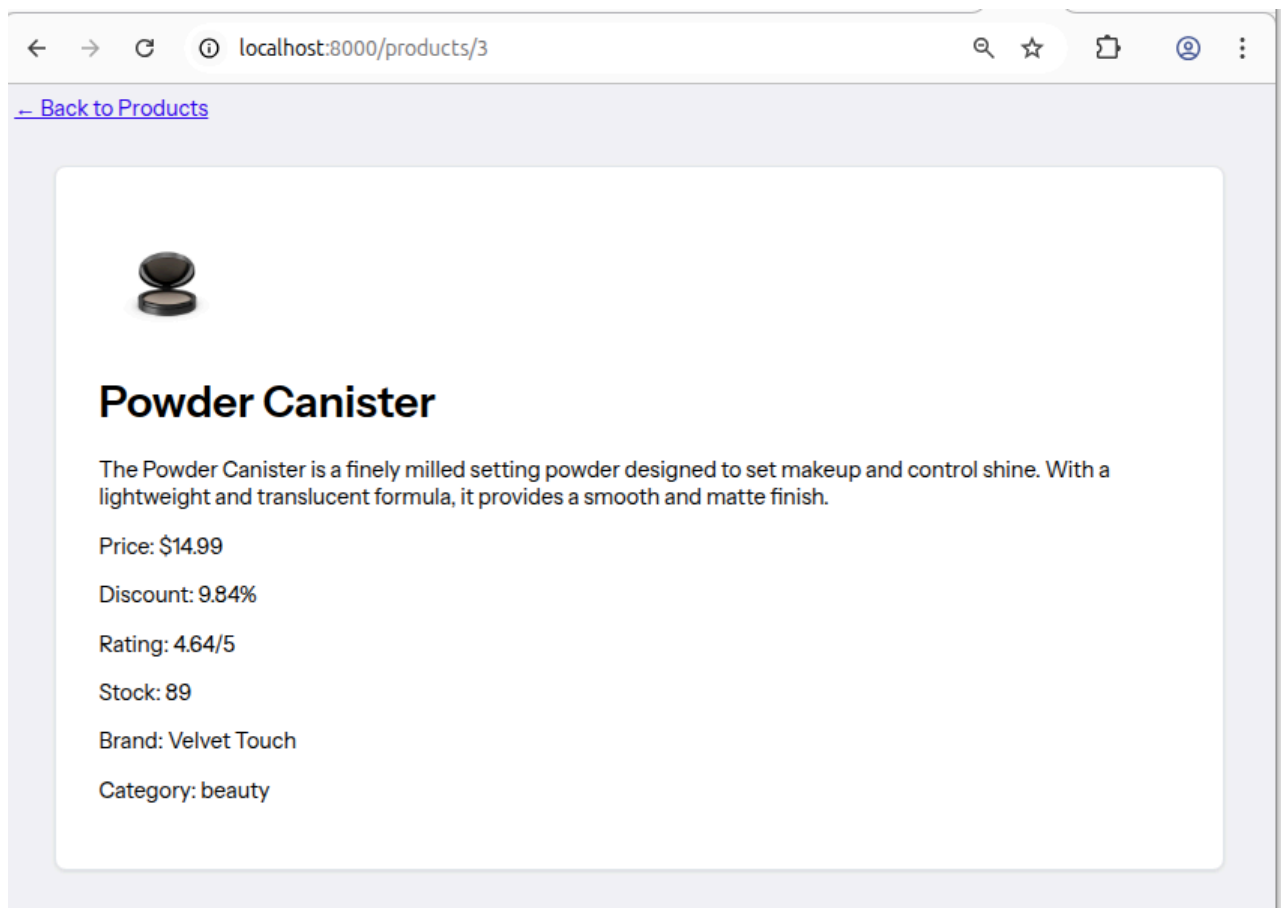

You can use the <https://dummyjson.com/products> API as public API to get the product list. The list should be somehow similar to the following image.

B. Every product title and thumbnail are a clickable link that when clicked will navigate to a new web page that will display the product details using the External API <https://dummyjson.com/products/{id}> The product must show the following attributes:

- a. title
- b. description
- c. price
- d. discount
- e. rating
- f. stock
- g. brand
- h. category
- i. image (thumbnail)

It should be somehow similar to the following image.

Good Luck 😊😊
